

Safety by training

MERITURVA

Maritime Safety Training Centre

Every year, Meriturva trains over 4,000 professional seafarers, students and other people travelling on waters, including maritime authorities, port staff, helicopter crews, boaters and cruise passengers.

Meriturva is an institute audited according to the International Maritime Organization's (IMO) Standards for Training, Certification and Watch-keeping (STCW) standard.

MERITURVA PROVIDES TRAINING FOR SEAFARERS

Meriturva is an institute owned by the Finnish Government that aims to improve the safety of seafarers and people using various methods of water transportation by offering a wide range of fire and survival training.

Basic and supplementary training for professionals is certified according to the STCW standard. In addition, we offer tailored safety courses for companies and communities.

Our training units are located in southern Finland. We arrange fire fighting training in Upinniemi, Kirkkonummi and survival courses in Lohja. We also arrange boat training throughout the year in the Ojamo mine lake and maritime drills in the Inkoo area.

The research and development of maritime safety is an important part of our activities. We are collaborating closely with the business sector, research facilities and universities

Meriturva's quality management process is certified
according to the ISO 9001:2015 standard
(Bureau Veritas Certification).

SURVIVAL AND EVACUATION DRILLS

Pool drills enable participants to learn survival and evacuation procedures in realistic and quickly changing conditions. The training pool is equipped with top-quality equipment, including a rescue helicopter simulator with a winch.

Realistic learning environments provide real-life professional expertise.

We train people to survive at sea, whether they travel alone or together. In practice, the training covers putting on your life jacket, climbing on top of a life raft and swimming in waves.

Photo above. The winching helicopter simulator provides an accurate simulation of an actual evacuation.

Photo below. In addition to professional seafarers, we provide training for boaters and people who travel by water infrequently, such as cruise passengers. The professional seafarers' training is certified according to the STCW standard.

HELICOPTER UNDERWATER ESCAPE TRAINING HUET

The HUET training is for helicopter pilots. Their training includes exiting a ditched helicopter. We can customise the training according to the customer's needs. For example, the training can include user training for life rafts, winching helicopters and HEED/CA-EBS equipment.

*Meriturva's HUET training
is always tailored to meet
the customer's needs.*

Meriturva's HUET is a domestic product and it can be modified according to several types of helicopters, which ensures the most efficient learning possible.

Photo above. First, the new circumstances are familiarised with the manually operated training device.

Photo below. Safety is highlighted in all activities of the actual HUET training.

Safety training is necessary for all professional pilots and aircraft crew members. Passengers can also benefit from the training in accidents by increasing their chances of survival.

SUCCESS STORIES ON LAND AND SEA

The world's most innovative marine technology is designed and built in Turku.

LIFEBOAT TRAINING

The training at the Ojamo mine lake includes operating a lifeboat, learning survival skills and operating in emergencies in cold and arctic conditions.

Safe boating training conditions throughout the year and in all types of weather.

The Ojamo training station's lifeboat rigging can be tilted in both directions. The training's realism is increased by a current produced by the current machinery.

Photo above. Free Fall Boats can be dropped along with their crew in Ojamo.

Photo below. Hitting the water is an experience to remember for those in the vessel and a necessary training procedure for actual accidents.

FAST RESCUE BOAT OPERATOR TRAINING

Our fast rescue boat operator courses are held at sea. Participants learn operating a fast rescue boat and searching and rescuing missing people in authentic conditions.

Meriturva's diverse fleet and experienced trainers guarantee the best possible results.

Everyone gets to have an opportunity to learn the efficient operation of an FRB.

The operation of an FRB and searching and rescuing drills are arranged in both light and dark conditions.

FIRE FIGHTING TRAINING

Fire fighting training includes extinguishing a fire, smoke diving and rescuing people in realistic conditions. We use a wide range of training simulators for different purposes.

We provide professional seafarers with fire fighting training certified according to the STCW standard. Some of the courses can be customised according to the customer's needs.

Even large fires can be safely extinguished in our training facilities.

DECK FIRES

Our outdoors training area provides an opportunity to simulate different types of deck fires. Participants will extinguish fires using both portable fire extinguishers and larger equipment. For example, electricity compartments are extinguished with a carbon dioxide extinguisher and people with a fire blanket.

Fires in closed spaces can be simulated and studied in a fire training container, which makes it easier to learn the appropriate method of extinguishing.

Heat protection sprays allow approaching targets on fire safely.

SHIP INTERIOR FIRES

Smoke diving simulators simulate fires in the engine room, cabins, car deck and other parts of the ship's interior. An instructor will supervise the situation's development and the participants' safety from the monitoring room for the entire duration of the simulation. The trainer can adjust the fire's intensity and cancel the entire training, if necessary.

Car deck fires are the most common reason behind serious fires in the Baltic sea.

Car deck fire extinguishing simulation provides ferry and roll-on/roll-off vessel crew members with efficient training.

**THE SIMULATION USES
GAS AND IT IS SAFE,

BRIDGE SIMULATOR

A modern bridge equipped with radars and navigation equipment provides authentic conditions for ship operation training. The simulation is made even more realistic by the changing weather conditions. The training is for special groups, such as professionals rescuers.

*Training is an investment
in accident prevention.*

Meriturva's bridge is equipped with a comprehensive range of navigation equipment.

Changing conditions and situations make the training more challenging and interesting.
