INDUSTRIAL PIPING,  
MACHINERY INSTALLATIONS, PRESSURE  
EQUIPMENT AND STEEL STRUCTURES

PROFESSIONALLY.

# YOUR INDUSTRY EXPERT

**Ukitig Oy** has an SFS-EN ISO 9001 certified quality system, an SFS-EN ISO 3834-2 compliant welding quality control system and an SFS-EN 1090-1 compliant certificate concerning the manufacture of welded steel structures. All our welders are certified according to the SFS-EN ISO 9606-1 standard and our welding operators according to the SFS-EN ISO 14732 standard. The certification of persons and welding methods covers the manufacture of piping systems and pressure equipment in accordance with the EU directive on pressure equipment (2014/68/EU).

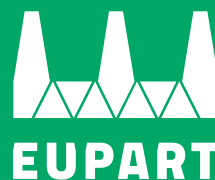

**Ukitig Oy** specialises in the manufacture and maintenance of demanding industry piping. Founded in 1982, the company has achieved a strong standing in the market in its field. Forestry, food, chemical, pharmaceutical, energy and water treatment professionals all over the world rely on the company's products and services.

Customers expect suppliers to deliver industry piping of the highest quality and to take safety into consideration in their work. Ukitig is able to meet this challenge by relying on its vast experience in the field and its customer-oriented way of operating. Our certified welders are capable of taking care of even the most challenging welds efficiently and safely – always in close cooperation with the customer's occupational safety organisation. Quality is strictly monitored using a system that is transparent to the customer. We document our projects according to the current standards and customer requirements.

Ukitig is an agile company that can flexibly meet its customer's demands. Often one of the last teams at a construction site, Ukitig is used to changing schedules. We can also respond quickly to larger needs on a tight schedule thanks to our extensive and professional subcontractor network that allows us to raise capacity even on short notice. Ukitig also constantly recruits the best talent in the field.

# INDUSTRIAL PIPING MADE TO ORDER

Steam piping and piping for the food industry have different qualities and demands. Ukitig understands the requirements of different operating environments.

Most of the pipe installation work is carried out at the customer's premises. When required, we manufacture the piping parts, prefabricated parts and steel structures at our own production facilities in Uusikaupunki. According to the customer's needs, Ukitig can also take care of material purchasing and subcontracting for other functions related to the project, making it possible to supply even more extensive units as a turnkey service.

- **Process pipings**
- **Small-diameter pipings**
- **Process equipment installations**
- **Steam-, high- and low pressure pipings**
- **Food industry pipings**
- **Chemical industry pipings**
- **Steel structures**
- **Piping in duplex and heat resisting steel**

# SERVICE AND MAINTENANCE

Repair and maintenance services for industry is a growing and developing part of our operations. Maintenance personnel can be ordered to different sites as needed, but in some customer locations Ukitig professionals are always present.

Safety is a key element also in maintenance operations. Ukitig's personnel always work according to safety regulations and use inspected tools and protective equipment.

We can meet the changing needs of our customers, whether that's a yearly contract, work that lasts a couple of days or large projects carried out during shutdowns that demand a large number of resources.

### **Lahti Energy Ltd, Lahti (2018–2019)**

Ukitig's contract in the building of the Kymijärvi III power plant of Lahti Energia included the supply and installation of a low pressure piping system, pipe bridges and walkways as well as the dismantling of old structures. This project involved supplying and installing 210,000 tonnes of carbon steel and stainless steel piping, 45,000 tonnes of primary and secondary supports and 120,000 tonnes of steel structures and pipe bridges. Ukitig was able to meet the customers' and authorities' demands thanks to its comprehensive project management skills and extensive documentation of quality and safety issues.

### **Fermion Oy, Hanko (2016–2017)**

Fermion Oy expanded its pharmaceuticals production plant and Ukitig took part in the piping installation as well as the prefabrication and installation of supports. A total of 24 kilometres of piping meeting the standards of the pharmaceutical industry was installed. Most of this piping was made of acid-proof stainless steel. Additionally, the piping included Hastelloy pipes and coated pipes. The project also included plastic pipe installation and pipe insulation works that were carried out by our subcontractors. Approximately 3,500 valves were also installed at the site.

Customer satisfaction is our main priority.
